| Subject objectives                          | Students obtain competence in the range of using methods of full range mathematical analysis and knowledge how to solve simple problems that can be found in the field of engineering.  |   |   |                        |            |  |              |       |  |  |
| Learning outcomes                           | Course out  | Subj  |   | Method of verification |            |  |              |       |  |  |
|   |   |   | Student defines basic notions of some elements of field theory, line and surface integrals, infinite, function and trigonometric Fourier series, differential and partial differential equations.   |                        |            | [SW1] Assessment of factual knowledge  |              |       |  |  |
|   | [K6_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study and perform tasks, in an innovative way, in not entirely predictable conditions, by:n- appropriate selection of sources and information obtained from them, assessment, critical analysis and synthesis of this information,n-selection and application of appropriate methods and toolsn |   | Student computes some basic elements of field theory. Student calculates line and surface integrals. Student studies canvergence of infinite and function series. Student determines general and particular solutions of some types of the first order differential equations and nth order linear differential equations with constant coefficients. |                        |            | [SU4] Assessment of ability to use methods and tools                               |              |       |  |  |

| Subject contents                | Line integrals of scalar fields. Line integrals of vector fields. Path independence. Greens Theorem. Surface integrals of scalar fields. Surface integrals of vector fields. Stokes Theorem. GaussOstrogradsky Theorem. Applications of line and surface integrals. Some elements of field theory. Orthogonal coordinate systems. Vector and integro-differential operations in orthogonal coordinate systems. Operational calculus. Differential operators: gradient, divergence, rotation, Laplacian. Vector and scalar fields. First order differential equations. Variables separable, linear, Bernoulli, exact differential equations. Higher order linear differential equations with constant coefficients. Infinite series. Convergence tests. Alternating series test. Absolute and conditional convergence. Function and power series. Radius and interval of convergence of a power series. Taylor and Maclaurin series. Trigonometric Fourier series. |  |                               |  |  |  |  |  |

| Example issues/<br>example questions/<br>tasks being completed | 1. Find the gradient of the scalar field $F(x,y,z) = x e^{yz}$ .   |
|--|--|
|  | 2. Check if the vector field W = [ $2xy+z^2$ , $x^2$ , $2xz + \cos z$ ] is potential.  |
|  | 3. Check whether the given series with general term $a = (n! \ 3^n) / (n^n)$ is convergent.  |
|  | 4. Find a particular solution of the differential equation (x+1) y' + y = ln x satisfying the initial condition y(1)=10.   |
|  | 5. Applying Laplace transform find a solution of the differential equation $y'' + 2y' = 2e^{-2x}$ satisfying the given initial conditions $y(0) = 0iy'(0) = 1$ . |
| Work placement   | Not applicable   |
