| Learning activity and number of study hours | Learning activity  | Participation in didactic classes included in study plan |   | Participation in consultation hours |        | Self-study  |         | SUM |
|   | Number of study hours  | 30   |   | 10.0                                |        | 60.0  |         | 100 |
| Subject objectives                          | Group project is a class, which goal is to prepare students for a future work in a team of several people and to learn them to fulfil scheduled obligations in a timely manner.  Project teams consisting of 3-5 students realize subjects chosen from submitted proposals. A product and a proper technical documentation are the effects of a year-long work on a chosen problem.  The project proposals can be submitted by Department partners and a work progress is controlled by supervisors assigned by a faculty coordinator. |  |   |                                     |        |   |         |     |

| Learning outcomes Course outcome |  | Subject outcome   | Method of verification  |  |  |  |  |
|----------------------------------|--|---|---|--|--|--|--|
|                                  | [K6_U03] can design, according to required specifications, and make a simple device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment   | The student is able to design, in accordance with the given specification, and perform a complex device, object, ICT system or implement the ICT process, using appropriately selected methods, techniques, tools and materials, using engineering standards and norms, using ICT technologies and using experience gained in the environment professionally engaged in engineering activities the student has the knowledge to | [SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment |  |  |  |  |
|                                  | understands the fundamental dilemmas of modern civilisation and basic economic, legal and other conditions of various types of activities related to the field of study, including the basic concepts and principles in the field of industrial property and copyright protection.   | assess the economic and legal possibilities of the project implementation   | contained in written work and projects [SW1] Assessment of factual knowledge  |  |  |  |  |
|                                  | [K6_U11] can plan and organise individual and team work  | the student understands the role of management in the project, knows and applies the chosen method of managing work in a group, supervising the production of project documentation   | [SU1] Assessment of task fulfilment   |  |  |  |  |
|                                  | [K6_K01] is ready to cultivate and disseminate models of proper behaviour in and outside the work environment; make independent decisions; critically evaluate actions of their own, teams they lead and organisations they are part of; take responsibility for results of these actions; responsibly perform professional roles, including:n - observing rules of professional ethics and require it from others,n - care for the achievements and traditions of the professionn | the student has the knowledge to develop patterns of proper conduct in the work and life environment, critically evaluate the groups in which he participates and lead the group and the appropriate division of roles and tasks among group members  | [SK5] Assessment of ability to solve problems that arise in practice  |  |  |  |  |
|                                  | [K6_U08] while identifying and formulating specifications of engineering tasks related to the field of study and solving these tasks, can:n- apply analytical, simulation and experimental methods,n- notice their systemic and non-technical aspects,n-make a preliminary economic assessment of suggested solutions and engineering work n   | The student is able to use both analytical, simulation and experimental methods to carry out an engineering task. The student is able to make a preliminary economic analysis.  | [SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject   |  |  |  |  |
| Subject contents                 | The choice of group  |   |   |  |  |  |  |
|                                  | Implementation of the project group  Presentation of the completed project   |   |   |  |  |  |  |
| Prerequisites and co-requisites  |  |   |   |  |  |  |  |
| Assessment methods and criteria  | Subject passing criteria project   | Passing threshold 50.0%   | Percentage of the final grade 100.0%  |  |  |  |  |
| Pacammended reading              | Basic literature   | materials related to the implemented project  |   |  |  |  |  |
| Recommended reading              | Supplementary literature   | Books on management   |   |  |  |  |  |
|                                  | eResources addresses   | Adresy na platformie eNauczanie:  |   |  |  |  |  |
